Question type: Multiple Choice

1) Extracellular fluid includes all of the following except:

a) interstitial fluid  
b) plasma  
c) cytosol  
d) lymph

Answer: c

Difficulty: Easy  
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.  
Section Reference 1: Sec 2.3 Cytoplasm

2) In passive processes, substances move across the plasma membrane
1. with the use of ATP  
2. up (or against) a concentration gradient  
3. down (or along) a pressure gradient  
4. equally in all directions

a) 3 only  
b) 2 only  
c) 1, 2, 3  
d) 2, 3, 4

Answer: a

Difficulty: Medium  
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.  
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.  
Section Reference 1: Sec 2.2 The Plasma Membrane

3) Which of the following is true regarding receptor-mediated endocytosis?
a) Vesicles transport receptors back to the plasma membrane.
b) A ligand binds specifically with a receptor on the extracellular surface of the plasma membrane.
c) Some transport vesicles fuse with a lysosome, which essentially breaks down the contents.
d) all of these choices

Answer: d

Difficulty: Hard
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane

4) Which of the following structures is not bounded by a membrane?

a) ribosome
b) lysosome
c) nucleus
d) Golgi complex

Answer: a

Difficulty: Easy
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm

5) Rough endoplasmic reticulum differs from smooth endoplasmic reticulum in that it has _____ associated with it; therefore rough endoplasmic reticulum assists in the production and temporary storage of _____.

a) inclusions, cytosol
b) lysosomes, lipids
c) ribosomes, lysosomes
d) ribosomes, proteins

Answer: d

Difficulty: Easy
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm
6) Organelles that are similar to small lysosomes, contain enzymes, and are important in detoxification are called _____.

a) ribosomes  
 b) mitochondria  
 c) peroxisomes  
 d) centrosomes

Answer: c

Difficulty: Easy  
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.  
Section Reference 1: Sec 2.3 Cytoplasm

7) A normal human body cell contains _____ chromosomes and a normal unfertilized human oocyte (egg) contains _____ chromosomes.

a) 46, 22  
 b) 44, 22  
 c) 46, 46  
 d) none of these choices is correct

Answer: d

Difficulty: Medium  
Study Objective 1: SO 2.5 Describe the stages, events and significance of somatic and reproductive cell division.  
Study Objective 2: SO 2.5.2 Discuss the stages, events, and significance of reproductive cell division.  
Section Reference 1: Sec 2.5 Cell Division

8) Which of the following is not located in the nucleus?

a) histones  
 b) chromatin  
 c) endosome  
 d) nucleolus

Answer: c

Difficulty: Medium  
Study Objective 1: SO 2.4 Describe the structure and functions of the nucleus.
Section Reference 1: Sec 2.4 Nucleus

9) What two processes must occur in order for a cell to divide to produce two new cells?

a) mitosis and meiosis  
b) nuclear division and cytokinesis  
c) anabolism and catabolism  
d) autophagy and endocytosis

Answer: b  
Difficulty: Medium

Study Objective 1: SO 2.5 Describe the stages, events and significance of somatic and reproductive cell division.
Study Objective 2: SO 2.5.1 Discuss the stages, events, and significance of somatic cell division.
Section Reference 1: Sec 2.5 Cell Division

10) The stages of the cell cycle occur in the following order:

a) G1, S, G2, mitosis  
b) S, G1, G2, interphase  
c) G1, G2, S, mitosis  
d) G1, G2, S, interphase

Answer: a  
Difficulty: Medium

Study Objective 1: SO 2.5 Describe the stages, events and significance of somatic and reproductive cell division.
Study Objective 2: SO 2.5.1 Discuss the stages, events, and significance of somatic cell division.
Section Reference 1: Sec 2.5 Cell Division

11) Which of the following events does not occur during prophase of mitosis?

a) The nucleolus and the nuclear membrane disintegrate.  
b) Each chromosome replicates so that it becomes a double-stranded structure.  
c) Centrosomes start to form the mitotic spindle.  
d) Chromosomes become visible due to the shortening and condensation of chromatin.

Answer: b  
Difficulty: Hard
Study Objective 1: SO 2.5 Describe the stages, events and significance of somatic and reproductive cell division.
Study Objective 2: SO 2.5.1 Discuss the stages, events, and significance of somatic cell division.
Section Reference 1: Sec 2.5 Cell Division

12) Which of the following contributes to aging?
   a) increased synthesis of protein
   b) viral invasion of cells
   c) free radical damage to protein and DNA
   d) decreased autoimmune response

   Answer: c

   Difficulty: Medium

Study Objective 1: SO 2.7 Describe the cellular changes that occur with aging.
Section Reference 1: Sec 2.7 Aging and Cells

13) Which of the following is not a function of the smooth endoplasmic reticulum in the liver?
   a) It removes toxic wastes.
   b) It contains calcium ions which are released to cause contraction.
   c) It releases glucose into the blood.
   d) All of these choices are functions of the smooth endoplasmic reticulum in the liver.

   Answer: b

   Difficulty: Hard

Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm

14) Proteins that will be exported from the cell are produced by
   a) ribosomes inside mitochondria
   b) ribosomes found in lysosomes
   c) ribosomes attached to rough endoplasmic reticulum
   d) ribosomes attached to smooth endoplasmic reticulum

   Answer: c

   Difficulty: Medium
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm

15) The process that results in the destruction of the “webbing” found between the digits of the hand and foot in early human fetal development is called

a) necrosis  
b) metaplasia  
c) apoptosis  
d) dysplasia

Answer: c

Difficulty: Medium

Study Objective 1: SO 2.5 Describe the stages, events and significance of somatic and reproductive cell division.
Study Objective 2: SO 2.5.1 Discuss the stages, events, and significance of somatic cell division.
Section Reference 1: Sec 2.5 Cell Division

16) A cell is recognized as “self” or “non-self” by its

a) mitochondria  
b) rough endoplasmic reticulum  
c) glycocalyx  
d) lysosomes

Answer: c

Difficulty: Medium

Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.1 Describe the structure and functions of the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane

17) When charged, medium-sized molecules like glucose and amino acids move across a membrane from high to low concentration, the following process has occurred.

a) simple diffusion  
b) osmosis  
c) active transport involving membrane proteins  
d) facilitated diffusion
Answer: d

Difficulty: Hard
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane

18) Which of the following is NOT characteristic of a cell’s nucleus?

a) Assembly of amino acids into proteins occurs in the nucleus.
b) The nucleolus synthesizes ribosomal RNA.
c) A pair of chromatids constitute a chromosome during cell division.
d) Assembly of ribosomes occurs in the nucleus.

Answer: a

Difficulty: Medium
Study Objective 1: SO 2.4 Describe the structure and functions of the nucleus.
Section Reference 1: Sec 2.4 Nucleus

Question type: True/False

19) Protein molecules form the basic framework of the plasma membrane.

Answer: False

Difficulty: Medium
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane
Study Objective 2: SO 2.2.1 Describe the structure and functions of the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane

20) Cytosol is an example of intracellular fluid.

Answer: True

Difficulty: Easy
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm
21) Active transport of molecules across cell membranes requires adenosine triphosphate (ATP) for energy.

Answer: True

Difficulty: Easy
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane

22) Endocytosis is the reverse of exocytosis and pinocytosis is the reverse of phagocytosis.

Answer: False

Difficulty: Medium
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane

23) Diffusion and osmosis are passive processes that occur primarily due to the kinetic energy of molecules.

Answer: True

Difficulty: Easy
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane

24) All cells of the body have at least one nucleus.

Answer: False

Difficulty: Medium
Study Objective 1: SO 2.4 Describe the structure and functions of the nucleus.

Answer: True

Difficulty: Easy
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm

26) Lysosomes contain enzymes that digest the contents of phagocytic vesicles, pinocytic vesicles, and endosomes.

Answer: True

Difficulty: Medium
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm

27) Microtubules form the structure of microvilli.

Answer: False

Difficulty: Hard
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm

28) The mitotic spindle consists of microtubules.

Answer: True

Difficulty: Easy
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm

29) When glucose bonds to proteins in tissues, it contributes to the stiffening and loss of elasticity that occur in aging tissues.
Answer: True

Difficulty: Hard
Study Objective 1: SO 2.7 Describe the cellular changes that occur with aging.
Section Reference 1: Sec 2.7 Aging and Cells

30) A neoplasm can result from uncontrolled cell division.

Answer: True

Difficulty: Medium
Study Objective 1: SO 2.7 Describe the cellular changes that occur with aging.
Section Reference 1: Sec 2.7 Aging and Cells

31) The proteins found in the phospholipid bilayer permit the movement of most substances, including oxygen and carbon dioxide, across the membrane.

Answer: False

Difficulty: Medium
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.1 Describe the structure and functions of the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane

32) Meiosis occurs in two stages and results in two daughter cells that are identical to the original cell.

Answer: False

Difficulty: Medium
Study Objective 1: SO 2.5 Describe the stages, events and significance of somatic and reproductive cell division.
Study Objective 2: 2.5.2 Describe the stages, events, and significance of reproductive cell division.
Section Reference 1: Sec 2.5 Cell Division

Question type: Essay

33) Draw and label a portion of a plasma membrane showing the molecular components of the membrane. Explain why “fluid mosaic” is a good description of the plasma membrane structure.
Answer:

Difficulty: Hard
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.1 Describe the structure and functions of the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane
Solution: See Figure 2.2. The molecular arrangement of the plasma membrane resembles an ever-moving sea of lipids that contains a “mosaic” of many different proteins. The proteins may float freely like icebergs or be bound in specific locations. The lipids prevent entry and exit of many substances while the proteins permit movement of specific water-soluble substances through the membrane.

34) Explain how the rough endoplasmic reticulum, smooth endoplasmic reticulum, and Golgi complex interact. Use specific examples of materials produced by each.

Answer:

Difficulty: Hard
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm
Solution: Ribosomes on the RER synthesize proteins destined for export from the cell, use by other organelles, or incorporation into the plasma membrane. Once these proteins are made on the ribosomes, they pass through the RER where sugars or lipids might be added. They then travel via vesicles to the Golgi where further processing, alterations, and packaging occurs. They are released within vesicles from the Golgi to travel to their final destination. The SER is found only in certain cells and has specialized functions. For instance, SER in the liver is involved with converting glucose to glycogen (and vice versa) and detoxifies drugs. SER in skeletal muscle stores calcium ions necessary for muscle contraction.

35) Integral membrane proteins play important roles in certain transport mechanisms. What roles do they play in osmosis, facilitated diffusion, and active transport?

Answer:

Difficulty: Medium
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane
Solution: Integral membrane proteins act as gatekeepers in the plasma membrane and permit the movement of certain substances into and out of the cell. Some proteins have open channels through which water may pass passively through the plasma membrane (osmosis). Others bind specifically to substances and may change shape to transport those substances into or out of the cell. If input of energy is required, it is an active process (active transport). If input of energy is not involved, it is passive (facilitated diffusion).

36) List and define: A) three passive processes and B) three active processes that move substances across cell membranes. Give an example of a molecule that is moved by each process.

Answer:

Difficulty: Hard
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane
Solution: See Table 2.1 for specifics.

37) For each stage of mitosis, give a two- or three-sentence description of events. Your answer should include the names of the four stages and proper use of the following terms: chromatin, chromosome, chromatid, and centromere.

Answer:

Difficulty: Hard
Study Objective 1: SO 2.5 Describe the stages, events and significance of somatic and reproductive cell division.
Study Objective 2: SO 2.5.1 Discuss the stages, events, and significance of somatic cell division.
Section Reference 1: Sec 2.5 Cell Division
Solution: See Figure 2.18 for explanation of the steps.

38) Describe the structure and function of a mitochondrion. What are the important components located within this organelle and where is each one located? What overall process occurs primarily in the mitochondrion?

Answer:

Difficulty: Medium
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm
Solution: See Figure 2.14. The mitochondrion is an organelle with a double-layered membrane. It is considered the powerhouse of the cell because it is the location where most ATP is produced. The inner membrane folds into cristae and contains the proteins necessary for the electron transport chain. The cristae effectively increase the surface area upon which cellular respiration may occur. The matrix, found in the center of the mitochondrion, contains enzymes that enable chemical reactions to occur. The mitochondrion contains its own DNA and can, therefore, replicate on its own.

39) Explain the difference between an oncogene and a proto-oncogene.

Answer:

Difficulty: Medium

Study Objective 1: SO 2.7 Describe the cellular changes that occur with aging.

Section Reference 1: Sec 2.7 Aging and Cells

Solution: Proto-oncogenes are normal genes that regulate growth and development. Through a series of mutations or changes the proto-oncogenes become cancer-causing genes called oncogenes that have the ability to transform a normal cell into a cancerous cell.

Question type: Text Entry

40) The letter A is pointing to the _____.

Answer: smooth endoplasmic reticulum
41) The letter B is pointing to a _____.

Answer: cilium
42) The letter C is pointing to the _____.

Answer: nucleolus

Difficulty: Easy
Study Objective 1: SO 2.4 Describe the structure and functions of the nucleus
Section Reference 1: Sec 2.4 Nucleus
Solution: nucleolus
43) The letter D is pointing to the _____.

Answer: Golgi complex

Difficulty: Easy
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm
Solution: Golgi complex
44) The letter E is pointing to a ______.

Answer: mitochondrion

Difficulty: Easy
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm
Solution: mitochondrion

45) The plasma membrane is composed of two layers of _____ molecules with _____ molecules scattered throughout.

Answer: phospholipid, protein

Difficulty: Medium
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.1 Describe the structure and functions of the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane
Solution: phospholipid, protein

46) Water travels continuously between interstitial fluid and intracellular fluid via the process of ______.
Answer: osmosis

Difficulty: Easy
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane
Solution: osmosis

47) Smooth endoplasmic reticulum is the site of production of _____.

Answer: fatty acids and steroids

Difficulty: Medium
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm
Solution: fatty acids and steroids

48) _____ is the process by which cell division results in two daughter cells that are identical to the original cell.

Answer: Mitosis

Difficulty: Easy
Study Objective 1: SO 2.5 Describe the stages, events and significance of somatic and reproductive cell division.
Study Objective 2: SO 2.5.1 Discuss the stages, events, and significance of somatic cell division.
Section Reference 1: Sec 2.5 Cell Division
Solution: Mitosis

49) The process in which lysosomes digest their host cell is called _____.

Answer: autolysis

Difficulty: Medium
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm
Solution: autolysis
50) The contents in the innermost region of a mitochondrion is the _____.

Answer: matrix

Difficulty: Easy
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm
Solution: matrix

51) The only human cell that has a flagellum is the _____ cell.

Answer: sperm

Difficulty: Easy
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm
Solution: sperm

52) Somatic cell division involves the process of _____ and cytokinesis.

Answer: mitosis

Difficulty: Medium
Study Objective 1: SO 2.5 Describe the stages, events and significance of somatic and reproductive cell division.
Study Objective 2: SO 2.5.1 Discuss the stages, events, and significance of somatic cell division.
Section Reference 1: Sec 2.5 Cell Division
Solution: mitosis
53) This figure illustrates a transport process known as _____.

Answer: receptor-mediated endocytosis

Difficulty: Medium
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane
Solution: receptor-mediated endocytosis

54) The transport process that moves oxygen from the air sacs in the lungs into surrounding blood vessels is called _____.

Answer: diffusion

Difficulty: Medium
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.

Section Reference 1: Sec 2.2 The Plasma Membrane
Solution: diffusion

55) The process that allows digestive cells to secrete enzymes is called _____.

Answer: exocytosis

Difficulty: Medium

Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.

Section Reference 1: Sec 2.2 The Plasma Membrane
Solution: exocytosis

56) A mechanism that involves the formation of pseudopods in order to move solid particles into cells is called _____.

Answer: phagocytosis

Difficulty: Medium

Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.

Section Reference 1: Sec 2.2 The Plasma Membrane
Solution: phagocytosis

57) Most body cells can engulf small droplets of extracellular fluid through a process called _____.

Answer: pinocytosis

Difficulty: Easy

Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.

Section Reference 1: Sec 2.2 The Plasma Membrane
Solution: pinocytosis
58) _____ maintains the unequal distribution of potassium and sodium ions across a nerve cell membrane.

Answer: Active transport

Difficulty: Medium
Study Objective 1: SO 2.2 Describe the structure, function and transport mechanisms of the plasma membrane.
Study Objective 2: SO 2.2.2 Outline the processes that transport substances across the plasma membrane.
Section Reference 1: Sec 2.2 The Plasma Membrane
Solution: Active transport

Question type: Multiple Choice

59) Which letter identifies the powerhouse of the cell?

a) B  
b) E  
c) F  
d) G
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm

60) Which letter identifies the rough endoplasmic reticulum?

Answer: a

Copyright © 2014 John Wiley & Sons, Inc. All rights reserved.
61) Which letter identifies an organelle that may contain more than 40 digestive enzymes used to break down the contents of vesicles?

a) F  
b) B  
c) A  
d) C

Answer: d

Difficulty: Hard
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm
62) Which letter identifies the organelle in the liver responsible for detoxification?

- a) A
- b) B
- c) H
- d) I

Answer: b

Difficulty: Hard
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm
63) Which letter identifies microvilli?

a) H  
b) E  
c) D  
d) B

Answer: b

Difficulty: Easy
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm
64) Which letter identifies the site of protein synthesis?

- a) G
- b) F
- c) D
- d) B

Answer: c

Difficulty: Medium

Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm

Question type: Essay

65) Higher and higher dosages of the drug are needed to achieve the original effect. This could result in an increased possibility of overdose and increased drug dependence.” This described drug-tolerance is due to increasing amounts of cellular ____.

Answer:

Difficulty: Medium
66) Meiosis I begins with a _____ (diploid/haploid) starting cell and ends with two cells, each with the _____ (diploid/haploid) number of chromosomes. During meiosis II, each of the two _____ (diploid/haploid) cells formed during meiosis I divides; the net result is four _____ (diploid/haploid) gametes that are genetically different from the original _____ (diploid/haploid) starting cell.

Answer:

Difficulty: Medium

67) Describe a function of microtubules.

Answer:

Difficulty: Medium

68) What is the function of microfilaments?

Answer:

Difficulty: Medium
69) Name the organelle that acts as the site of protein synthesis. What two molecular components make up its structure?

Answer:

Difficulty: Medium
Study Objective 1: SO 2.3 Describe the structure and function of cytoplasm, cytosol, and organelles.
Section Reference 1: Sec 2.3 Cytoplasm
Solution: ribosomes; protein and rRNA

Question type: Multiple Choice

70) Which letter indicates interphase; the period during which DNA is replicated?

a) A
b) B
c) C
d) D
e) E

Answer: c

Difficulty: Medium
Study Objective 1: SO 2.5 Describe the stages, events and significance of somatic and reproductive cell division.
Study Objective 2: SO 2.5.1 Discuss the stages, events, and significance of somatic cell division.
Section Reference 1: Sec 2.5 Cell Division

71) In which phase are chromosomes visible as 46 structures that are not aligned?

Answer: d
72) The nucleoli disappear during which phase?

a) A  
b) B  
c) C  
d) D  
e) E

Answer: d
Study Objective 2: SO 2.5.1 Discuss the stages, events, and significance of somatic cell division.

Section Reference 1: Sec 2.5 Cell Division

73) Which letter indicates metaphase?

a) A  
b) B  
c) C  
d) D  
e) E

Answer: e

Difficulty: Medium

Study Objective 1: SO 2.5 Describe the stages, events and significance of somatic and reproductive cell division.

Study Objective 2: SO 2.5.1 Discuss the stages, events, and significance of somatic cell division.

Section Reference 1: Sec 2.5 Cell Division
74) During which phase do centromeres divide so that the sister chromatids separate?

a) A  
b) B  
c) C  
d) D  
e) E

Answer: a

Difficulty: Medium
Study Objective 1: SO 2.5 Describe the stages, events and significance of somatic and reproductive cell division.
Study Objective 2: SO 2.5.1 Discuss the stages, events, and significance of somatic cell division.
Section Reference 1: Sec 2.5 Cell Division
75) Identify the letter that indicates telophase.

a) A  
b) B  
c) C  
d) D  
e) E

Answer: b

Difficulty: Medium
Study Objective 1: SO 2.5 Describe the stages, events and significance of somatic and reproductive cell division.
Study Objective 2: SO 2.5.1 Discuss the stages, events, and significance of somatic cell division.
Section Reference 1: Sec 2.5 Cell Division
